Key words: water, importance, agriculture students

SUMMARY

We often perceive liquid water (H\textsubscript{2}O) to be ordinary as it is transparent, odourless, tasteless and ubiquitous. However, liquid water is the most extraordinary substance. Although we drink it, wash, fish and cook with it, we nearly always overlook relationship it has with our lives. Droughts cause famines and floods cause death and disease. We are about two thirds of water and without it, we die within a few days. In this paper we have tried to present importance of water to tertiary level agriculture students via the text and accompanying exercises.
