Key words: Investments, Investors, Investment risks.

SUMMARY

Necessity and the importance of an investment of investments as domestic and foreign, for successful development of business in agroindustrial sector of Republic Moldova, and also problems which investors face are revealed and studied.

The agroindustrial sector of Republic Moldova having the vital value for national economy faces set of problems: low level of financing of economic agents; insufficient use of the modern equipment and intensive technologies and so on. Constant financial investments are necessary for the decision of these important problems of agroindustrial sector.

It is necessary to use correctly the involved investments into agroindustrial sector, namely into those enterprises of the given sector which make necessary production for satisfaction of requirements of the population of the country. The enterprise can increase volume of manufacture of production which it exports abroad. At use of investments the enterprise of the given sector can get the necessary modern techniques, intensive technologies, get high-yield crops and productive cattle, and so on.

Having necessary financing, economic agents of agroindustrial sector of Republic Moldova can raise productivity of production, improve its qualitative characteristics, make an ecological foodstuff.

It is not necessary to forget about risk occurrence at an investment of investments into activity of any enterprise. Risks can be natural-climatic character, external, industrial-technological, information, and so on. It is very important to systematize investment risks, characteristic republics for agroindustrial sector, by means of use of mechanisms of their prevention or decrease.

The further increase in financial investments into agroindustrial sector with instructions of sources of financing and ways of their application is necessary.
