

## PAYNG OF THE LIVESTOCK AND THE BLOODSTCK

**Chis Margareta , Lucica Armanca**

University of Agricultural Studies and Veterinary Medicine, Cluj Napoca, 1-3 Manastur Road

**Key words:** livestock and bloodstock, exploiting period, usage period.

### SUMMARY

The matters connected to the paying-off bloodstock and working animals point out their particularities as object of investment, which lead to fund immobilization. Investments in animals are influenced by the long period need to reach to the basic flock, respectively to the category of corporal immobilizations respectively, as well as the evolution of the production level according to the animal's ages.

Since January 1-st 2005, the sistem of age limit has been used between a minimum and a maximum, thus existing the posibility to choose the normal functioning time between these limits. The difference between the two systems are presented in the folowing table.

Table

Dictionary of corespondence including provisions of GD 964/1998-GD2139/2004

Clasification and normal functioning periods of means acc. To GD 964/1998		The new clasification and normal functioning periods of fixed means to GD 2139/2004	
Clasification code	Dn (year)	Clasification code	Dn (year)
5.1. Animals		2.4.1. Animals	
5.1.1.	10	2.4.1.1. Pedigree and burder horses. Donkeys and mules..	8-12
5.1.2.	7	2.4.1.2. Burden oven and buffaloes; milking cows and pedigree bulls.	5-9
5.1.3.	5	2.4.1.3. Sheep, goats and pedigree pigs.	4-6
5.1.4.	3	2.4.1.4. Pedigree poultry.	2-4
5.1.5.	6	2.4.1.5. Guardian and hunting dogs.	4-8
		2.4.1.6. Other animals not included in the 2.4.1.category.	4-6

For livestock and bloodstock, the period of usage corresponds to the period of exploitation. The yearly reform percentange is proportional to the exploiting duration of animals, being equal to the corresponding paying-off rate.

These modifications have favourable influences in what regards the real presentation of the profitability of livestock exploitations.
