Abstract. We realized a study with 73 patients who had: cardiovascular disorders, osteo-articular manifestations, neurological and psychiatric manifestations. Patients were examined using Oberon bioresonance device, making biocompatibility tests of AD bio-phyto-modulators. Responses obtained were different depending on the presence or absence of bio-phyto-modulators. So, in presence of protection to various energy fields, the effect of bio-phyto-modulator is significant.

Keywords: bio-phyto-modulators, the energy body and physical body of human, health, surrounding energy fields

INTRODUCTION

Holistic Medicine has proved that our aura is most sensitive and becomes ill or heals before our physical body. Aura is the electromagnetic field of physical body. Placing physical body between earth and cosmos, each with its magnetism, it causes aura's changes. Human body is an antenna through its arms and legs connect body with ground, which makes it sensitive to earthly currents (Frenchet, 2007).

Electromagnetic fields created by human such as power lines, electrical transformers, GSM antennas, home or office equipment generate harmful vibrations that interact with our body. Just to keep health physical and energy bodies, we must use a protection against these harmful vibrations, protection provided by the bio-phyto-modulators which are designed to repel negative energies and fields that we can get sick (Frenchet, 2007; Ronecker, 2006). On such things understand that it is not enough to protect only the physical body but also the energy

Many of the diseases of patients already have manifestations to the physical body, changes highlighted by allopathic medicine too. But many come for the sufferings that have no physical cause. In these cases energy body was affected and still there were no changes to physical body. For these patients are AD bio-phyto-modulators, which require energy balance restoring to those who have already arrived, by persistent energy imbalances, to physical manifestation (Dincă, 2005).

MATERIALS AND METHODS

The group of study was consisting of 73 patients, aged between 17-60 years, during one year, 33 males and 40 females. Diseases for which were presented to cabinet were often associated as follows in Tab. 1.

Patients from rural areas were at a rate of 16.72% and from urban rate of 83.73%, both having the houses near power lines, transformers, own TV antennas. I should mention that people's age with chronic conditions like: HTA, ischemic heart disease, atherosclerosis, osteoporosis, spondylarthrosis, decreased very much among young people of 30-45 years old.

Thus eight patients aged between 26-45 years old had herniated disc, surgery and even some relapses, or an outstanding symptoms, hypertension and frequently chest pain for 26 to 28 years. There are patients with symptoms of radiculitis with oscillating tension that detected no organic cause of symptoms.

Tab. 1

Associated diseases in case of patients from study group

Disease	Cardio-vascular disorder	Osteo-articular disorder	Respiratory disorder	Autoimmune diseases	Fatigue, insomnia, panic attacks, depressive psychosis, anxiety	Atypical depression with suicidal tendency
No. of patients	47	36	27	31	43	1

Patients were evaluated using Oberon bioresonance device setting DIEE and DEA biocompatibility. Starting from the fact that in study are active people who come in direct contact and more time with electromagnetic sources which disrupt the human body's energy balance, we tested also AD bio-phyto-modulators for neutralizing harmful fields around us.

I have got better percent testing DNRN-3, DNRN-4 and DNRN-GSM in the mean time with DIEE and DEA than for separate trials. There were structures where we tested the biocompatibility in case of one DNRN and DEA, and we got very good answers to: arterial circulatory, venous or lymphatic systems; central and peripheral nervous system; endocrine system; osteoarticular system especially for autoimmune diseases.

There were many cases in which psychological problems were assigned, were less and low intensity using DNRN and a correct hydration, quantitatively and qualitatively, with DEA.

RESULTS AND DISCUSSION

We have studied 47 patients with cardiovascular disease aged 27-60 years. I can not say that those over 50 events are "normal", but developing this disease at 27-35 years is unnatural. These young people are active, working 8-10 hours per day, often in offices with multiple computers.

Thus A.O. 35 years comes accusing: cold extremities, headache, chest pain, laboratory tests showing hyperlipidaemia. I've tested biocompatibility of DEA and DNRN-4 and have obtained improvement of the 42%.

Another case is B.A. 22 years complaining of oscillatory tension, headache and cold extremities. In this case responses were amazing testing DNRN-4 on: trunk vessels + 37%; blood circulation at the base of brain + 32%; venous circulation to the legs + 41%.

M I patient, 45 years old, who already has two bypass a period of one year, was retired due to illness. He blamed fatigue, chest pain, arrhythmias. We tested DIEE to coronary vessels and obtained an improvement of 21%. Knowing that patient worked as a runner we tested DNRN with DIEE and DEA, and the response was 48% improvement, which is why I recommended bio-phyto-modulator for neutralizing radiation.

D.N. patient 48, a priest in Vrancea County, has headaches, palpitations, chest pain. Note that to workplace, the church, had no such crisis, but when he got home accused changes and symptoms appeared. I have done diagnosis of vascular and nervous system and I

identified neurovegetative symptoms that after testing DIEE and DEA on these structures we obtained 21-28% improvements. Knowing that patient lived in Focsani and symptoms appeared at home I tested DNRN-3 to neutralize the telluric energy and the answer was 42% improvements!

Other 36 patients had associated osteoarticular pain type: spondylosis, gonarthrosis, coxarthrosis, ankylosing spondylitis.

Thus CM for 23 years old came for a diagnosis. When I tested DIEE and DEA bio-phyto-modulators to circulatory system structures and articular surfaces we obtained 24% improvement. Lady works for two years inside of an airport, so we tested and DNRN-3, DNRN-4 and DNRN-GSM. The responses were enlightening: in case of DNRN-4 were 2% improvement, DNRN-3 were 19% improvement and DNRN-GSM 33% improvement.

Patient S.A. 31 years old with a diagnosis of ankylosing spondylitis, an autoimmune disease, did not respond in 2 years to classic treatment, accusing peripheral circulation disorders. I made bioresonance analysis that confirmed the diagnosis, but we found changes to energy level on thymus, peripheral circulation, pancreas and spleen, articular surfaces.

We tested the biocompatibility of the AD bio-phyto-modulators and got good answers, but the best we have obtained in case of DEA and DNRN-4 as follows:

- peripheral circulation DNRN-4 + DEA = +30%
- thymus DNRN-4 + DEA = +11%
- pancreas and spleen DNRN-4 + DEA = +49%
- joint surfaces DNRN-4 + DEA = +48%

D.C. 36 years old, operated for herniated disc L5-S1 one year past and not fully recovered even now, with peripheral circulation disorders, persistent headache. We concluded that degradation of structures in the spine (articular surfaces, intervertebral ligaments, intervertebral discs) occurred as a result of poor circulation of the area. This way of interpreting symptoms were confirmed by bioresonance exam: the tendency to hypotension, neurovegetative disorders and a tendency to dyslipidaemia, so I've tested biocompatibility of large vessels of the trunk: DNRN-4 = 54%, pancreas and spleen DNRN-4 = 36%, peripheral circulation DIEE + DEA + DNRN-4 = 28%, spine column 2DIEE + DEA + DNRN-4 = 43%, all improvements.

A case in point of AD bio-phyto-modulators effectiveness is A.E., patient of 57 years old in rural areas, coming accompanied by her daughter, showing: joint, knees and ankles pains, abnormal peripheral circulation insidious installed 5-6 years ago. She revealed that close to her house have a high voltage line and a television antenna so that bioresonance exam showed mainly neuro-vegetative disorders and poor hydration. In that case we tested DNRN-4, DIEE and DEA. Answers to biocompatibility tests of peripheral circulation and joint in case of DNRN-4 and DEA gave improvements between 75-82%. Knowing that the cabinet's space is protected from electromagnetic fields and the patient came from another location before time programming and stayed 2-3 hours in this space, I was curious and asked her to rise from chair and tell me if still feels pain in knees and ankles. So she rises up and was able to move her feet easier than in the coming moment. After a few weeks the effectiveness of DNRN 4, DEA and 2 DIEE – fixed on liver and sternum (minimum maintenance schedule status health), was confirmed.

Another category is a group of 43 patients with psychiatric manifestations ranging from insomnia, anxiety, agitation, depression, panic attacks and atypical psychosis with tendency to suicide (Ronecker, 2006).

Electromagnetic fields around us act on our energy body which is affected first, but, lucky for us, is the first who recover when we know how to intervene. Central nervous system, containing about 90% water is a very sensitive structure to circulatory, oxygenation, fatigue, electromagnetic aggression changes structure, the latter more common and more varied. No wonder that more and more young people are more sensitive to these attacks, have adjusting trouble to society, have a violent behavior, are intolerant, seem bored and turn to "solutions" to solve problems such as isolation, drugs, suicide.

Most of these young patients, aged between 17-35 years, active people who work 8-10 hours per day at the computer for 5 -10 years and, among other issues, tells us that they feel tired, do not sleep well, have tried remedy things with natural products, supplements, detoxification cures, which helped for a period, but symptoms reappears after some time. It is correct what they report, but it is true that the results are not satisfactory because it does not remove the cause.

Majority of these patients did not require many bio-phyto-modulators, but DNRN-4 and DEA were the ones who react to most of the problems. Patients who have used these bio-phyto-modulators have not accused insomnia, anxiety, panic attacks were rare and no longer have the same intensity, fatigue is not felt so acutely, they gain confidence and moments of depression were removed.

As happened with M.D. 32 years old. Percentages of improvements to DNRN-4 and DEA tests were: cerebral circulation = 47%, nerves = 48%, thymus= 46%, trachea and bronchi = 50%, all improvements.

Patient A.E. 28 years old with insomnia, agitation, panic attacks accompanied by paroxysmal tachycardia, working at computer 10 hours per day for 10 years, received DNRN type bio-phyto-modulators. Answers using the test are striking: cerebral circulation DNRN-4 + DEA = 27%, conductive system of the heart DNRN-4 + DEA = 50%, brain DNRN-4 + DEA = 24%, thyroid DNRD-4 = 27%, adrenals DNRN-4 = 50%, all improvements.

CONCLUSIONS

From the study on 73 patients, men and women, from urban and rural areas, working age with various diseases on the cardiovascular system, joints, immunity system, neuro-psychic system we can conclude that using AD bio-phyto-modulators get better results in treating many diseases. Whether these bio-phyto-modulators protect us from telluric, power lines, GSM antennas, computers, microwaves or cell phones, all have negative influence to energy body with the occurrence of disturbances symptoms. This is the stage where allopathic medicine by means of investigation, which shows only changes to the physical body, can not find a cause of disease. It is important to prevent structure modifications installation, to make a preventive medicine and DNRN do this – don't let it show disturbances in the energy body, maintain the body's energy balance. When this balance was broken and kept more time in these conditions, permits appearance of changes in the physical body and is necessary to use also AD bio-phyto-modulators.

Before treat, can prevent!
